11

Refractive Errors

12

Refractive Errors

- No refractive error
- Light focuses on the retina with no help

13

Refractive Errors

- Myopia
- Near-Sightedness
- Eyeball too Long / Cornea too steep
- Images focus in the Vitreous
- Corrected with Minus Lenses

14

Refractive Errors

- Hyperopia
- Far-Sightedness
- Eyeball too Short / Cornea too flat
- Images focus past the Retina
- Correct with Plus Lenses

15

Refractive Errors

- Emmetropia
- Myopia
 - Pseudomyopia - caused by an involuntary contraction of the ciliary muscle. The unintended accommodation will blur distance objects. This accommodative spasm may be caused by excessive near work
- Hyperopia
 - Latent Hyperopia - refers to when a portion or all of the hyperopia is being compensated for through accommodation. A cycloplegic refraction is needed to measure the amount of hyperopia particularly in a young patient.
- Astigmatism
- Presbyopia

16

Types of Astigmatism

- 3 Types:
 - Simple
 - Compound
 - Mixed
- 5 Total Versions
 - Simple Myopia
 - Simple Hyperopia
 - Compound Myopia
 - Compound Hyperopia
 - Mixed Astigmatism

17

Types of Astigmatism

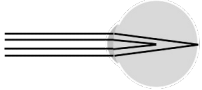

Simple Hyperopic:
One meridian is falling on Plano while the other is falling beyond the Retina.

RX Example
 Plano +1.00 @ 180
 +1.00 -1.00 @ 90

18

Types of Astigmatism

Simple Myopic
One meridian is falling on Plano while the other is falling inside the Vitreous.

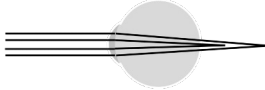

RX Example
Plano -1.00 @ 180
-1.00 -1.00 @ 90

19

Types of Astigmatism

Compound Hyperopic
Both meridians are falling beyond the Retina.

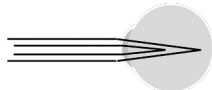

RX Example
+1.00 +1.00 @ 180
+2.00 -1.00 @ 90

20

Types of Astigmatism

Compound Myopic
Both meridians are falling in the Vitreous.

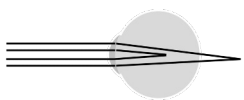

RX Example
-1.00 -1.00 @ 180
-2.00 +1.00 @ 90

21

Types of Astigmatism

Mixed Astigmatism
When a meridian falls inside the Vitreous and one falls beyond the Retina.

RX Example
-1.00 +2.00 @ 180
+1.00 -2.00 @ 90

22

Refractive Errors

Spherical Rx:

- Simple Hyperopia
- Simple Myopia

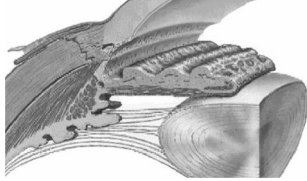

Spherocylindrical:

- Simple Hyperopic Astig
- Simple Myopic Astig
- Compound Hyperopic Astig
- Compound Myopic Astig
- Mixed Astigmatism

23

Accommodation

- Amplitude of Accommodation
 - Age
 - Push-Up Method
- Accommodative Facility
 - Insufficiency
 - Flipper

24

Accommodation

- amplitude of accommodation = is the max amt of accommodation in an eye
- The amplitude of accommodation declines with age
 - Approx 14 diopters at age 10
 - Approx 0.50 diopters at age 60.
- Push Up Test move 20/20 near chart until blurs

25

Accommodation

- Accommodation in diopters is equal to the viewing distance in centimeters divided into 100.
- The uncorrected hyperope will need to accommodate more.
- The uncorrected myope will need less accommodation.
- Error + Accommodation required = Total Accommodation

Age	Accommodation	Near Point
10	14.000	7cm 2.9in
20	10.000	10cm 4.0in
30	7.000	14cm 5.7in
40	4.500	22cm 8.9in
50	2.500	40cm 16.0in
60	1.000	100cm 40.0in

$$D = \frac{100 \text{ cm}}{VD}$$

26

Accommodation

- Accommodative facility is the eyes ability to focus on stimuli at various distances and in different sequences in a given period of time.
- The patient looks at a small target while a flipper with plus and minus lenses is alternated in front of the eyes.(for example, +2.00D lenses on one side and -2.00D lenses on the other side)
- Insufficient accommodation below age level may be caused by fatigue, stress, mTBI, systemic medications, ocular inflammation, thyroid disease or juvenile diabetes mellitus.

27

28

Convergence

- Near Point of Convergence (NPC)
- Light
- Break Point
- Greater than 7cm abnormal

29

- Focal Length**
 $D = \frac{1}{f \text{ meters}}$
- Nominal Lens Power**
 $F_T = F_1 + F_2$
- Horizontal Decentration**
 $\frac{FPD}{2} - \text{Mono PPD} = HD$
- Index Formula**
 $N = \frac{\text{Speed of light in air (186,000mps)}}{\text{speed of light in medium}}$
- Vertical Decentration**
 $OC - \frac{B}{2} = VD$
- Vertex Compensation**
 $Dc = \frac{dD^2}{1000}$
- Minimum Blank Size**
 $MBS = ED + (2 \times \text{Mono Dec})$
- Prentice Rule**
 $\Delta = \frac{dD}{10}$ $d = \frac{\Delta \times 10}{D}$ $D = \frac{\Delta \times 10}{d}$

30

- Sagittal Formula For Thickness**
 $Sag = \frac{n-1}{d} - \sqrt{\left(\frac{n-1}{d}\right)^2 - \left(\frac{d}{r}\right)^2}$
- Martins Lens Tilt**
2 Degrees for every 1 mm is lowered
 $S' = S \left[1 + \frac{(\sin \alpha)^2}{2n} \right]$ $C' = S' (\tan \alpha)^2$
- Sagittal Formula for Thickness Approximation**
 $Sag = \frac{(d/2)^2 \times nD}{2000(n-1)}$
- Oblique Powers at 90 & 180**
 $Power @ 90 = (\sin(Axis))^2 + CYL + SPH$
 $Power @ 180 = (\sin(Axis))^2 + CYL + SPH$
- Resolving Prism**
 $V = (P)(\sin \alpha)$
 $H = (P)(\cos \alpha)$
- Specular Magnification**
 $SM = \left[\frac{1}{1 - \frac{1}{n} d_1} \right] \left(\frac{1}{1 - nD} \right)$
- Resultant Prism**
 $P = \sqrt{H^2 + V^2}$
 $\alpha = \tan^{-1} \left(\frac{V}{H} \right)$

31

Flat Transposition

-1.00 -1.00 @ 180
-2.00 +1.00 @ 090

Add	Add SPH + CYL (algebraically)
Change	Change SIGN of CYL power
Change	Change AXIS 90 Degrees

32

33

34

35

Oblique Cylinder Power

- TO DETERMINE THE PORTION OF CYLINDER POWER AWAY FROM THE AXIS
- 90 DEGREES = FULL CYLINDER POWER
- 60 DEGREES = 75%
- 45 DEGREES = 50%
- 30 DEGREES = 25%
- 0 DEGREES (at axis) = 0%
- Works in either direction

-2.50 -2.00 @ 030

- Use axis to know percentage of cylinder power to use
- Use percentage and multiply into cylinder power.
- Take percentage of cylinder power and add to sphere power.

36

Oblique Cylinder Power

What is the power at 180 and 90 for following Rxs:

-3.00 -1.00 x 055

Power @ 90

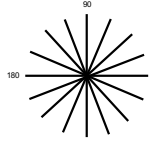

Power @ 90 = $(\sin(35)^2 \times 1.00 + 3.00)$

Power @ 90 = 3.33 (3.37)

Power @ 180

Power @ 180 = $(\sin(55)^2 \times 1.00 + 3.00)$

Power @ 180 = 3.67 (3.62)

Power @ 90 = $(\sin(\text{AXIS})^2 \cdot \text{CYL} + \text{SPH})$

Power @ 180 = $(\sin(\text{AXIS})^2 \cdot \text{CYL} + \text{SPH})$

37

Prism

Measurement

Patient Problems

- Base Down
- Base Up
- Base In or Out

Decentration to obtain prism

Slab Off

Image Jump

38

Prism: Patient Problems

Excessive Base Down:

- Bottom of bowl
- Floor looks concave
- Looking / Walking UP hill
- Objects TALLER/looking up at objects

Excessive Base Up:

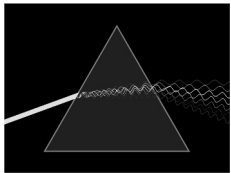

- Top of ball/mound
- Floor is convex
- Looking / Walking DOWN hill
- Objects SHORTER/looking down at objects

Excessive Base In or Base Out:

- May cause the wearer to see horizontal objects as high at one end and low on the other
- The too high side will always be towards the apex.

39

Prism Measurements

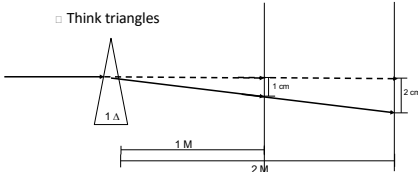

- One prism diopter = Deviate light by 1 cm over 1 M
- Think triangles

40

Prism Measurements

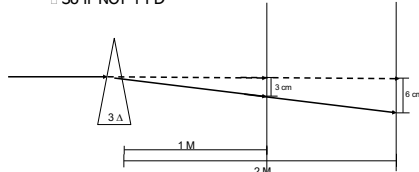

- One prism diopter = Deviate light by 1 cm over 1 m
- Think triangles

41

Prism Measurements

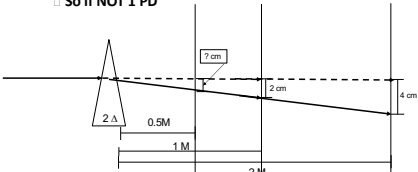

- One prism diopter = Deviate light by 1 cm over 1 M
- Think triangles
- So if NOT 1 PD

42

Prism Measurements

- One prism diopter = Deviate light by 1 cm over 1 M
- Think triangles
- So if NOT 1 PD

43

Prism Measurements

How much does a 3 Δ deviate light at:

1 M = 3cm
 2 M = 6cm
 3 M = 9cm

0.5M = 1.5 cm

44

Prism Measurements

So simply put your Prism diopters in a Fraction form (over 1)

3 Δ = 3/1

- That is essentially your fraction/ or ratio. (3cm/1M)

If a question asks how much is deviated:

45

46

Prentice's Rule

□ The prismatic effect of a lens on rays of light that pass through it at points other than its optical center is equal to the product of the the dioptric power of the lens and the distance in centimeters from the optical center to the point of passage.

$$\Delta = \frac{dD}{10} \quad d = \frac{\Delta \times 10}{D} \quad D = \frac{\Delta \times 10}{d}$$

- Δ = prismatic effect
- D = Lens BVP (in D)
- d = distance from OC (in mm)

47

Examples

$$\Delta = \frac{dD}{10} \quad d = \frac{\Delta \times 10}{D} \quad D = \frac{\Delta \times 10}{d}$$

48

RESULTANT PRISM

EXAMPLE:
Based on the following parameters OD PL 3Δ BU & 5Δ BI
What is the resultant prism?

$$P = \sqrt{H^2 + V^2}$$

$$a = \tan^{-1} \left(\frac{V}{H} \right)$$

In this example:
a. $H = 5$, $V = 3$, $P^2 = 5^2 + 3^2 = 34$, and $P = \sqrt{34} = 5.8^{\Delta}$, $\tan a = 3/5 = 0.6$, and $a = 31^{\circ}$
(Use the **tan** key.)
b. Since 31° is between 0 and 90, which is what we wanted, the resultant prism is $5.8^{\Delta} @ 031^{\circ}$, or $5.8^{\Delta} BU \& I @ 031^{\circ}$. In the lensmeter the target will look like this:

49

RESOLVING PRISM

4-35. The prism found in the lensmeter for a pair of glasses is $2.0^{\Delta} @ 045$, and the lens is a right lens.
Resolve this prism into its component parts.
On the diagram the long side P of the triangle is 2.0 and the angle $\angle a$ that the prism makes with the axis is 45 degrees. The angle 45° is quadrant I, which is U and I for the right lens.
 $V = (P)(\sin a) = (2.0)(\sin 45) = (2.0)(0.707) = 1.4^{\Delta} BU$, since V is vertical
 $H = (P)(\cos a) = (2.0)(\cos 45) = (2.0)(0.707) = 1.4^{\Delta} BI$, since H is horizontal
The prism resolves to $1.4^{\Delta} BI \& 1.4^{\Delta} BU$.

$$V = (P)(\sin a)$$

$$H = (P)(\cos a)$$

50

Resolving and Resultant Prism Trick

51

Bi-Centric Grinding

□ Figuring out Slab Off or Reverse Slab Off

- Find Power at 90 for both eyes
- Find "drop" (how much do the eyes move down from Dist to Near VERTICALLY)
- Use prentices rule to determine Prism induced in each eye
- Find difference, and that is amount of slab off to order at near

SLAB-OFF AND REVERSE SLAB-OFF		
SLAB-OFF	SLAB-OFF	REVERSE SLAB-OFF
Two minus lenses	Highest minus	Lowest minus
Two plus lenses	Lowest plus	Highest plus
One plus, one minus	The minus lens	The plus lens

52

Bi-Centric Grinding

OD -4.00 -2.00 x 180
OS -2.50 -0.50 x 180 +2.50 Add OU
ST 28 bifocal

Looking 4 mm above seg at distance
Looking 5 mm below seg while reading
Total 9mm drop

OD: Power at 90 = -6.00 Drop = 9mm prism = 5.4
OS: Power at 90 = -3.00 Drop = 9mm prism = 2.7

Difference = 2.7 Prism diopters...will require that much Slab off in OD to eliminate vertical imbalance

53

Bi-Centric Grinding

□ Slab Off

Note...can also take DIFFERENCE in dist power at 90 between OD and OS and multiply by amount eye drops vertically and will come up with same difference (as long as ADDs are similar)

54

Prism Problems

Decentration to obtain prism problem

How far must a +2.00 +2.00 x 135 lens be moved to create 2Δ?

55

Prism Problems

Decentration to obtain prism problem

How far must a +2.00 +2.00 x 135 lens be moved to create 2Δ?

$$Sph = +2.00$$

$$+50\% \text{ of } Sph = +1.00$$

$$Total Power = +3.00$$

$$Dec_{cm} = \frac{\Delta}{P_{in Dio}} = \frac{2}{3} = .67 \text{ cm} = 6.7 \text{ mm}$$

56

Induced prism due to decentration error.

How much prism and what base direction is created if a -5.00 -1.00 x 60 is decentred 5mm too much?

57

Induced prism due to decentration error.

How much prism and what base direction is created if a -5.00 -1.00 x 60 is decentred 5mm too much?

$$Sph = -5.00$$

$$+75\% \text{ of } Sph = -3.75$$

$$Total Power = -8.75$$

$$\Delta = P \times d_{cm}$$

$$\Delta = 8.75 \times .5 \text{ cm} = 4.375 \Delta$$

58

Examples

- ☐ Make sure you understand Oblique Axes
- ☐ Power at 90 and or 180
- ☐ ANSI standards (vertical and horizontal)
- ☐ Prisms (induced/decentered)
- ☐ Slab off
 - ☐ find diff in vertical meridian/90 OD vs OS
 - ☐ Find diff vertical
 - ☐ Use prentices rule to find amount of prism

59

End of Part 1

60
